Skin Cancer Follow-up Study

U.S. Radiologic Technologists Study
A collaborative effort between the University of Minnesota School of Public Health, National Cancer Institute, and American Registry of Radiologic Technologists.

SKIN CANCER MAP

Why study skin cancer in the USRT population?

- Skin cancer is the most common type of cancer.
- It can be caused by both ionizing radiation and ultraviolet (UV) radiation from sunlight.
- The USRT study provides a unique opportunity to study the independent and combined effects of these types of radiation on skin cancer and melanoma, which are also linked to sunlight exposure.
- More than 4,000 new cases of skin cancer and 700 new cases of melanoma were reported on the third survey.

Please take a few minutes to complete the enclosed Skin Cancer Follow-up Form and mark the location of each skin cancer on this Skin Cancer Map.

A postage paid envelope is enclosed for return of the study materials. If you have any questions, please call the University of Minnesota USRT study office at 1-800-447-6466.

Your participation in this Skin Cancer Follow-up Study is greatly appreciated.

CONFIDENTIALITY:
Please be assured that all information you provide will be kept confidential and will not be disclosed to anyone but the researchers conducting this study, except as otherwise required by law. Any published results from this study will be reported in statistical summaries only and will never include a participant’s name. Your participation in this study is completely voluntary and failure to answer any particular question or the information collection as a whole will not affect your future contacts with the University of Minnesota, the American Registry of Radiologic Technologists, or the National Institutes of Health.
Instructions:

You may use a pen or pencil to complete this form.

√ Review the enclosed USRT Third Survey Skin Cancer Follow-up form to verify skin cancers you have previously reported. Add any new skin cancers you have had diagnosed since that time.

For purposes of this study, please report only those skin cancers that were confirmed by pathology review. Do not report "precancerous" skin lesions or lesions that were treated but never confirmed to be skin cancer. If you can't remember exact details, just report as much information as you can.
